# SAMPLING FRESHLY MIXED CONCRETE FOP FOR WAQTC TM 2

Pa	articipant NameExam Date		
Re	ecord the symbols "P" for passing or "F" for failing on each step of the chec	klist.	
Pr	rocedure Element	Trial 1	Trial 2
1.	Receptacle dampened and excess water removed?		
2.	<ul> <li>Obtain a representative sample from drum mixer:</li> <li>a) Concrete sampled after 1/2 m³ (1/2 yd³) discharged?</li> <li>b) Receptacle passed through entire discharge stream or discharge stream completely diverted into sampling container?</li> </ul>		
3.	Obtain a representative sample from a paving mixer:  a) Concrete sampled after all the concrete has been discharged?  b) Material obtained from at least 5 different locations in the pile?  c) Avoid contaminating the sample with sub-grade materials.		
4.	<ul> <li>Obtain a representative sample from a pump:</li> <li>a) Concrete sampled after 1/2 m³ (1/2 yd³) has been discharged?</li> <li>b) All the pump slurry is out of the lines?</li> <li>c) Receptacle passed through entire discharge stream or discharge stream completely diverted into sampling container?</li> <li>d) Do not lower the pump arm from the placement position.</li> </ul>		
5.	Samples transported to place of testing?		
6.	Sample(s) combined, or remixed, or both?		
7.	Sample protected?		
8.	Minimum size of sample used for strength tests 0.03 m <sup>3</sup> (1ft <sup>3</sup> )?		
9.	Completed temperature test within 5 minutes of obtaining sample?		
10.	. Start tests for slump and air within 5 minutes of obtaining sample?		
11.	. Start molding cylinders within 15 minutes of obtaining sample?		
12.	. Protect sample against rapid evaporation and contamination?		
13.	<ul> <li>Wet Sieving:</li> <li>a) Required sieve size determined for test method to be performed?</li> <li>b) Concrete placed on sieve and doesn't overload the sieve.</li> <li>c) Sieve shaken until no more material passes the sieve.</li> <li>d) Sieving continued until required testing size obtained.</li> </ul>		

Procedure Element	Trial 1 Trial 2		
<ul><li>e) Oversized aggregate discarded.</li><li>f) Sample remixed.</li></ul>			
Comments: First attempt: PassFail	Second attempt: PassFail

# PERFORMANCE EXAM CHECKLIST (ORAL)

#### SAMPLING FRESHLY MIXED CONCRETE **FOP FOR WAQTC TM 2**

Pa	rticipant NameExam Date		
Re	cord the symbols "P" for passing or "F" for failing on each step of the checklist.		
Pr	ocedure Element	Trial 1	Trial 2
1.	What is the minimum sample size? a) 0.03 m <sup>3</sup> or 1 ft <sup>3</sup>		
2.	<ul> <li>Describe how to obtain a representative sample from a drum mixer.</li> <li>a) Dampen receptacle and empty excess water.</li> <li>b) Sample the concrete after 1/2 m³ (1/2 yd³) has been discharged.</li> <li>c) Pass receptacle through entire discharge stream or completely divert discharge stream into sampling container.</li> </ul>		
3.	Describe how to obtain a representative sample from a paving mixer.  a) Dampen receptacle and empty excess water.  b) Sample the concrete after all the concrete has been discharged.  c) Obtain the material from at least 5 different locations in the pile.  d) Avoid contaminating the sample with sub-grade materials.		
4.	<ul> <li>Describe how to obtain a representative sample from a pump:</li> <li>a) Dampen receptacle and empty excess water.</li> <li>b) Sample the concrete after 1/2 m³ (1/2 yd³) has been discharged.</li> <li>c) Make sure all the pump slurry is out of the lines.</li> <li>d) Pass receptacle through entire discharge stream or completely divert discharge stream into sampling container.</li> <li>e) Do not lower the pump arm from the placement position.</li> </ul>	<u>=</u>	
5.	After obtaining the sample or samples what must you do? a) Transport samples to place of testing.		
6.	What must be done with the sample or samples once you have transported them to the place of testing?  a) Combine and remix the sample.  b) Protect sample against rapid evaporation and contamination.		
7.	<ul><li>What are the two time parameters associated with this test?</li><li>a) Complete temperature test and start tests for slump and air within 5 minutes of sample being obtained?</li><li>b) Start molding cylinders within 15 minutes of sample being obtained?</li></ul>		
8.	What test methods may require wet sieving?  a) Slump, air content, and strength specimens?		

Procedure Element	Trial 1	Trial 2
<ul><li>9. The sieve size used for wet sieving is based on?</li><li>a) The test method to be performed.</li></ul>		
<ul><li>10. How long must you continue wet sieving?</li><li>a) Until a sample of sufficient size for the test being performed is obtained.</li></ul>		
<ul><li>11. What is done with the oversized aggregate?</li><li>a) Discard it.</li></ul>		
<ul><li>12. What must be done to the sieved sample before testing?</li><li>a) Remix.</li></ul>

# TEMPERATURE OF FRESHLY MIXED CONCRETE FOP FOR AASHTO T 309

Participant Name	Exam Date
Record the symbols "P" for passing or "F" for failing on each	ch step of the checklist.
Procedure Element	Trial 1 Trial 2
1. Obtain sample of concrete large enough to provide a r 75 mm (3 in.) of concrete cover around sensor in all d	
2. Place temperature measuring device in sample with a (3 in.) cover around sensor?	minimum of 75 mm
3. Gently press concrete around thermometer?	
4. Read temperature after a minimum of 2 minutes or whetemperature reading stabilizes?	hen
5. Complete temperature measurement within 5 minutes obtaining sample?	s of
6. Record temperature to nearest 0.5°C (1°F)?	
Comments: First attempt: PassFail	Second attempt: PassFail

### **SLUMP OF HYDRAULIC CEMENT CONCRETE FOP FOR AASHTO T 119**

Pai	rticipant Name Exam Date		
Re	cord the symbols "P" for passing or "F" for failing on each step of th	e checklist.	
Pr	ocedure Element	Trial 1	Trial 2
Fir	rst layer		
1.	Mold and floor or base plate dampened?		
2.	Mold held firmly against the base by standing on the two foot pieces? Mold not allowed to move in any way during filling?		
3.	Representative sample scooped into the mold, moving a scooperimeter of the mold to evenly distribute the concrete as discharged.	•	
4.	Mold approximately one third (by volume), 67 mm (2 5/8 in.) dec	ep?	
5.	Layer rodded throughout its depth 25 times with hemispherical end of rod, uniformly distributing strokes?		
Sec	cond layer		
6.	Representative samples scooped into the mold, moving a scoop a perimeter of the mold to evenly distribute the concrete as discharged.		
7.	Mold filled approximately two thirds (by volume), 155 mm (6 1/s	8 in.), deep?	
8.	Layer rodded throughout its depth 25 times with hemispherical enuniformly distributing strokes, penetrate approximately 25 mm (1) the bottom layer?		
Th	ird layer		
9.	Representative sample scooped into the mold, moving a scoop are perimeter of the mold to evenly distribute the concrete as discharged		
10.	. Mold filled to just over the top of the mold?		
11.	. Layer rodded throughout its depth 25 times with hemispherical errod, uniformly distributing strokes, penetrate approximately 25 m into the second layer?		
12.	. Excess concrete kept above the mold at all times while rodding?		
13.	. Concrete struck off level with top of mold using tamping rod?		

Procedure Element	Trial 1	Trial 2
14. Concrete removed from around the outside bottom of the mold?		
15. Mold lifted upward 300 mm (12 in.) in one smooth motion, without a lateral or twisting motion of the mold, in $5 \pm 2$ seconds?		
16. Test performed from start of filling through removal of the mold within 2 1/2 minutes?		
17. Slump immediately measured to the nearest 5 mm (1/4 in.) from the top of the mold to the displaced original center of the top surface of the specimen?

# DENSITY (UNIT WEIGHT), YIELD, AND AIR CONTENT (GRAVIMETRIC) OF CONCRETE FOP FOR AASHTO T 121

Par	ticipant Name Exam Date		
Rec	ord the symbols "P" for passing or "F" for failing on each step of the checklist.		
Pro	ocedure Element	Trial 1	Trial 2
1.	Mass and volume of empty measure determined?		
Fir	st Layer		
2.	Dampened measure filled approximately one third full, moving a scoop around the perimeter of the measure to evenly distribute the concrete as discharged?		
3.	Layer rodded throughout its depth 25 times, without forcibly striking the bottom of the measure, with hemispherical end of rod, uniformly distributing strokes?		
4.	Perimeter of the measure tapped 10 to 15 times with the mallet after rodding?		
Sec	ond layer		
5.	Measure filled approximately two thirds full, moving a scoop around the perimeter of the measure to evenly distribute the concrete as discharged?		
6.	Layer rodded throughout its depth, just penetrating the previous layer (approximately 25 mm (1 in.)) 25 times with hemispherical end of rod, uniformly distributing strokes?		
7.	Perimeter of the measure tapped 10 to 15 times with the mallet after rodding?		
Thi	ird layer		
8.	Measure filled, moving a scoop around the perimeter of the measure to evenly distribute the concrete as discharged?		
9.	Layer rodded throughout its depth, just penetrating the previous layer (approximately 25 mm (1 in.)) 25 times with hemispherical end of rod, uniformly distributing strokes?		
10.	Perimeter of the measure tapped 10 to 15 times with the mallet after rodding each layer?		
11.	Any excess concrete removed using a trowel or a scoop, or small quantity of concrete added to correct a deficiency, after consolidation of final layer?		

**OVER** 

27\_T121\_pr\_15 Concrete 6-15 Pub. October 2016

Procedure Element	Trial 1	Trial 2
12. Strike-off plate placed flat on the measure covering approximately 2/3 of the surface, then sawing action used to withdraw the strike-off plate across the previously covered surface?		
13. Strike-off plate placed flat on the measure covering approximately 2/3 of the surface, then sawing action used to advance the plate across the entire measure surface?		
14. Strike off completed using the inclined edge of the plate creating a smooth surface?		
15. All excess concrete cleaned off and mass of full measure determined?		
16. Net mass calculated?		
17. Density calculated correctly?

#### AIR CONTENT OF FRESHLY MIXED CONCRETE BY THE PRESSURE METHOD **FOP FOR AASHTO T 152**

Paı	rticipant Name Exam Date		
Re	cord the symbols "P" for passing or "F" for failing on each step of the checklist.		
Pr	ocedure Element	Trial 1	Trial 2
1.	Representative sample selected?		
Fir	est Layer		
2.	Dampened measure filled approximately one third full, moving a scoop around the perimeter of the measure to evenly distribute the concrete as discharged?		
3.	Layer rodded throughout its depth 25 times, without forcibly striking the bottom of the measure, with hemispherical end of rod, uniformly distributing strokes?		
4.	Perimeter of the measure tapped 10 to 15 times with the mallet after rodding?		
Sec	cond layer		
5.	Measure filled approximately two thirds full, moving a scoop around the perimeter of the measure to evenly distribute the concrete as discharged?		
6.	Layer rodded throughout its depth, just penetrating the previous layer (approximately 25 mm (1 in.)) 25 times with hemispherical end of rod, uniformly distributing strokes?		
7.	Perimeter of the measure tapped 10 to 15 times with the mallet after rodding?		
Th	ird layer		
8.	Measure filled, moving a scoop around the perimeter of the measure to evenly distribute the concrete as discharged?		
9.	Layer rodded throughout its depth, just penetrating the previous layer (approximately 25 mm (1 in.)) 25 times with hemispherical end of rod, uniformly distributing strokes?		
10.	Perimeter of the measure tapped 10 to 15 times with the mallet after rodding each layer?		
11.	Concrete struck off level with top of the measure using the bar or strike-off plate and rim cleaned off?		
12.	Top flange of base cleaned?		

**OVER** 

30\_T152\_pr\_15 Concrete 7-13 Pub. October 2016

Procedure Element	Trial 1	Trial 2
Using a Type B Meter:		
13. Both petcocks open?		
14. Air valve closed between air chamber and the measure?		
15. Inside of cover cleaned and moistened before clamping to base?		
16. Water injected through petcock until it flows out the other petcock?		
17. Water injection into the petcock continued while jarring and or rocking the meter to insure all air is expelled?		
18. Air pumped up to just past initial pressure line?		
19. A few seconds allowed for the compressed air to stabilize?		
20. Gauge adjusted to the initial pressure?		
21. Both petcocks closed?		
22. Air valve opened between chamber and measure?		
23. The outside of measure tapped smartly with the mallet?		
24. With the main air valve open, gauge lightly tapped and air percentage read to the nearest 0.1 percent?		
25. Air valve released or closed and then petcocks opened to release pressure before removing the cover?		
26. Aggregate correction factor applied if required?		
27. Air content recorded to 0.1 percent?
